SUMMARY

React Native engineer with 5+ years of commercial mobile development on B2B products (iOS + Android, React, TypeScript, Redux Toolkit), ~3 of them on a large enterprise CRM as a top-3 contributor by commit volume. I own features and platform work end-to-end on a New Architecture codebase (Fabric, TurboModules, Hermes), including Nitro/JSI native modules: major React Native / React / TypeScript upgrades, design-system migration, real-time chat and media. Alongside mobile, I'm growing a DevOps skill set: Linux, Docker, Kubernetes, and hands-on mobile CI/CD (Jenkins, fastlane).

SKILLS

Mobile / Frontend React Native (0.81), New Architecture (Fabric, TurboModules, JSI), Hermes, Nitro Modules, native modules, React (19), TypeScript 5 (strict), Redux Toolkit, RTK Query, React Navigation 7, Reanimated, Skia, react-native-mmkv, Jest, Detox (E2E), JavaScript/ES6+, HTML5, CSS/SCSS, Tailwind

DevOps / Infra Linux, Docker, Kubernetes, CI/CD (Jenkins, fastlane), Gradle, Git/GitHub/Bitbucket

Tools / Practices REST API, Swagger/generated types, BFF (backend-for-frontend), Firebase (Analytics, Crashlytics, Messaging, Remote Config), Notifee, ESLint, Prettier, patch-package, Husky, TDD/unit testing, performance profiling (Flipper, React DevTools, Reactotron), Confluence

EXPERIENCE

React Native Developer — Sber Business Soft

08/2023 – Present (~3 years)

Full-time · enterprise mobile CRM "Мой CRM"

Enterprise CRM platform comparable to Bitrix24 (iOS + Android): ~5.2K MAU, 20,000+ App Store installs, users in 4 countries (Russia, Kazakhstan, Latvia, the Netherlands). Built on a universal entity engine: almost no static screens; every entity, its fields, and its behavior are configurable. In-house design system with extensive customization. Team of ~6 mobile engineers; personally contributed 900+ commits.

- Led major React Native, React, and TypeScript 5 upgrades across a ~130-screen codebase; resolved native and third-party breakages via patch-package and staged dependency migrations without disrupting feature delivery.
- Migrated dozens of screens to a new in-house design system (~116 components) during a full product redesign, standardizing theme, spacing, and typography; rebuilt charts on Skia with pinch-to-zoom gestures.
- Owned the filtering and sorting subsystem for 2 years: grew it from basic controls to configurable saved filters and aggregate/graph filters, then reworked it against a new API contract (v2).
- Built the client side of the real-time chat feature: voice messages with a lock gesture, an audio player, resumable attachments, and an MMKV message cache for instant load, using the nitro-sound JSI module and Reanimated.
- Steadily reduced architectural debt over ~3 years: migrated reducers to RTK slices, removed circular dependencies, and restructured navigation into stacks.
- Shipped entity-engine features that work for any entity type rather than per screen: drag-and-drop kanban (multiple configuration-driven models, role-based and branching stage transitions) and configurable layout fields.
- Integrated the app with a dedicated mobile BFF (backend-for-frontend) layer that adapted the web backend for mobile-only features, within a web + mobile ecosystem of multiple sub-products.

- Maintained CI scripts and build/env configuration for 3 environments (IFT / PSI / Production) and hotfix builds, editing Jenkins Groovy pipelines and fastlane lanes; all PRs went through strict CI quality gates (zero-warning ESLint, Prettier, strict tsc, circular-dependency checks, unit tests).
- Currently build and publish iOS and Android releases to the App Store and Google Play; every release passes a mandatory security audit.

After the redesign, leadership cited the product as a flagship example, and clients thanked the team for the new experience.

React Native Developer — WestPower

04/2022 – 08/2023 (~1.5 years)

Full-time

- Built from scratch and maintained an order-picking mobile app for a B2B grocery retail chain (iOS + Android), deployed across 200+ stores: order intake, barcode scanning of items into the cart, delivery handoff, and in-app payment.
- Developed the chain's customer-facing store app and LeMurr, a pet-supplies store app.
- Ran the full release cycle solo: submitted builds to the App Store and Google Play, shipped over-the-air (OTA) updates via EAS Update, and maintained the store listings.
- Stack: React Native, Redux Toolkit, Zustand, Reanimated, React Query, EAS Update (OTA).

Frontend Developer (outsourcing) — IT-Incubator

08/2021 – 04/2022 (~8 months)

Contract

- Delivered two commercial projects as part of an external team, including an internal staff portal for Saint Petersburg State University (SPbU): cross-platform apps built with React / React Native, Redux Toolkit / RTK Query, Next.js, and Node.js.

Mediator — Mediation Service Center (St. Petersburg State Institution)

2016 – 2021

Negotiation and conflict resolution for individuals and groups, plus mediator training and supervision; a foundation in communication and stakeholder management.

PROJECTS

- **ops-forge** — personal DevOps lab: a Dockerized full-stack environment with a NestJS backend and a React/Vite/Tailwind frontend, a Dockerfile per service, an nginx reverse proxy, a Makefile, and Playwright E2E tests. · github.com/IvanFestina/ops-forge

EDUCATION

- Saint Petersburg State University (SPbU) — Social Psychology, BSc + MSc, 2009 – 2016
- IT-Incubator — Frontend Developer (course), 2021
